

The University of Miami School of Architecture Spring 2024 Tecnoglass Lecture Series

The Health, Safety + Welfare of Architecture

The profession defines the duty of the architect in terms of Health, Safety and Welfare. The demands on contemporary architectural practice are stretching these responsibilities to include critical challenges such as social inequity, environmental stewardship, and climate change impacts. The 2023-2024 Tecnoglass series features practices that have meaningfully impacted the built environment by energizing disciplinary dedications with persistent innovation and imagination. They work through the pragmatic demands of Health, Safety, and Welfare and reach with an expanded material/formal capacity beyond traditional boundaries to tackle the big challenges we face today.
